COMBAT RESOURCE DEPLETION AND ASSET DEPRECIATION CAUSED BY OFFSETTING PRODUCTION

GuildOne has deployed offset solutions in the oil and gas industry for nearly a decade, evolving with changing industry and regulatory requirements to become what is now known as Offset Studio.

Offset Studio is equipped to handle the most complex scenarios, such as horizontal wells and spacing units through the integration of new technology to better identify and manage opportunities and optimize revenue potential.

GuildOne’s Offset Studio presents a significant, yet often overlooked opportunity to capitalize on already-owned assets. The solution is modeled around industry needs and has evolved to become the leader in its space. GuildOne welcomes the opportunity to partner with organizations to help them realize the potential of their asset base.

For more than two decades, GuildOne Inc. (GuildOne) has supplied advanced database solutions and business intelligence to the oil and gas industry so organizations can better understand and use data to enhance business performance.

Since 2016, GuildOne has invested in the research and development of emerging technologies such as blockchain, machine learning, and artificial intelligence, culminating in the release of its Royalty Ledger, the first successfully executed commercial network using blockchain technology to transact an energy smart contract.

A pioneering technology company, GuildOne recently launched the Energy Block Exchange (EBX), a blockchain business network for energy organizations. EBX is designed as a compatibility zone for the industry to share secure smart contracts, settle payments, and ensure rights and revenue completion. This application of smart contracts will eliminate disputes between counterparties by securely and privately sharing key facts enabling near-instant contract settlement.

Offset Studio identifies offset candidates and facilitates the analysis of land rights by using rights descriptions in conjunction with public data to calculate adjacent parcels of land, and then matching wells on adjacent parcels of land with rights from the land system to identify and manage offset opportunities.
